DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/20/2006 has been entered.

Allowable Subject Matter

2. Claims 2-12,17,18,33,57-63 are allowed.

Claims 26,27,29-32,34 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States

Art Unit: 3651

only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 19,21-25,28 are rejected under 35 U.S.C. 102(e) as being anticipated by Itoh USP 6,763,927.

Itoh discloses a roller conveyor comprising:

- A pair of opposite sidewalls (fig.8)
- At least two tandem zones (fig.18), each comprising a plurality of idler rollers (73) mounted to said sidewalls (by way of the mount in fig.4), each tandem zone comprising an article sensor (C1/L30-38)
- A transverse drive system comprising a transverse drive unit at each of said at least two tandem zones, wherein each of said transverse drive units comprises a motorized roller (2) positioned generally transverse to said plurality of idler rollers and a plurality of drive members (83) connected between said motorized roller and at least some of said plurality of idler rollers, each said motorized roller having an internal motor (fig.4,6,8)
- Said motorized rollers being independently operable (one motorized roller is used for each set of idler rollers; see fig.6,8)
- A control being operable to activate and deactivate said internal motor (C17/L7-14)
- Wherein said idler rollers are positioned generally orthogonal to said sidewalls (the idler rollers face the sidewalls; fig.7,8)
- Wherein said motorized roller is positioned generally orthogonal to said idler rollers (fig.6)
